

Capstone Project

Smart Pantry

1. Project Description

Smart Pantry is a web application that helps users organize and manage their kitchen inventory efficiently. Users can log their grocery items, track expiration dates, and receive suggestions for recipes based on the ingredients they already have.

2. User Story

- As a user, I want to register and log in so that I can manage my personal pantry.
- As a user, I want to add new items with their name, quantity, category, and expiration date so I can keep track of them
- As a user, I want to edit or delete existing items so my inventory stays up to date.
- As a user, I want to view a list of items sorted by expiration date so I can use them before they expire.
- As a user, I want to categorize my items (e.g., vegetables, dairy, canned goods) to find things faster.
- As a user, I want to create and store recipes that include ingredients and instructions
- As a user, I want to link items to recipes so I know what ingredients are needed
- As a user, I want to see a list of recipes I can make with what I currently have in my pantry
- As a user, I want to receive notifications or alerts when items are about to expire
- As a user, I want a clean, warm, and easy-to-use kitchen-themed interface
- As a user, I want to track my shopping history or items I frequently run out of.
- As a user, I want to mark favorite recipes for quick access
